

Access Control

CLOUD ACCESS CONTROL SOFTWARE

**an access control system
that is integrated with
personnel management.**

The software that works alongside you for managing your company's security.

SOFTWARE

Access Control is the cloud solution for access control that:

- controls access in all areas of buildings by employees and visitors, both on foot and using vehicles.
- checks the situation in the event of emergencies, for example, in the event of evacuation, Access Control prepares a list of people present, to aid the search for people who have not been evacuated.
- knows which people enter the building and how long they remain inside in real time.
- manages various types of badges: with expiry date, one-off use, ticket, decremental

Access Control

ACCESS CONTROL IS AVAILABLE:

Cloud

Services can be obtained without installing the software. Access Control will be hosted on our servers where the data will be subjected to daily backups.

On-site

Thanks to the pay per use solution you know the monthly cost exactly, with no surprises.

Thanks to the control terminals AxessTMC Access Control controls any company entrance, for example:

- normal and REI doors;
- turnstiles;
- pedestrian and vehicle gates (also with long-range opening function);
- mobile bollards that lower into the ground.

SOFTWARE CHARACTERISTICS:

Rapid: once the contract is activated, the application is ready to use, without the need to install any software.

Compatible with all web browsers (MSIE, Mozilla Firefox, Opera, Safari, Chrome).

Configured for online functioning in real-time

Mobile: with the Oltre APP, available on Play Stores, collaborators on the move are always in touch with the company.

Integrated: the Oltre Suite shares the same database, so each APP can be integrated with the other APPs in the Suite.

Shares: the employee and visitor access situation is always under control in real time.

Simple: the operator interface for the package was designed to make it as intuitive as possible.

Access Control allows dialogue with terminals connected in the following modes: local (via serial line) and in Ethernet.
