

**ZUCCHETTI AXESS implemented their Time & Attendance system with multifunctional LEGIC® R&W terminals at AIRBUS Spain**

**Airbus, leading Aircraft Manufacturer active in 80 countries, has recently upgraded their Time & Attendance system at the Spanish manufacturing plants in Madrid and Sevilla. Zucchetti Axess together with the Spanish Partner Softmachine have implemented a complete, multifunctional attendance system integrating LEGIC security technology.**

**Zucchetti Axess** became OEM LEGIC Partner in 2003, designing and manufacturing multifunctional readers and programmable terminals in Italy.

**Airbus** has been partnering with LEGIC for several years, since the company decided to adopt this high security technology within their organization.

When **Airbus** came across **Zucchetti Axess** during a LEGIC Meeting, a challenging Partnership came into being and the global aircraft company started purchasing LEGIC badge readers by **Zucchetti Axess**.

In 2010 **Airbus** short-listed some qualified suppliers in order to carry out an upgrade project in 4 military aircraft manufacturing plants in Madrid and Sevilla. The purpose was to replace the existing HW devices with new LEGIC equipments to harmonize with the security standards of the Airbus Group. The requirements of the system were quite ambitious: multi-application capability, integration with the existing system, flexibility and functional modularity.

**Softmachine, Zucchetti Axess** local Partner, successfully carried out the project by delivering 120 EtherTRAX+G terminals with LEGIC® reader, interfaced with the existing SAP HR module, through **Zucchetti Axess** certified XAtl@s SAP connector module. The EtherTRAX+G terminals were especially configured to read the proprietary Airbus segment from high security LEGIC badges. Moreover, **Zucchetti Axess** X-Atl@s software was used to fully monitor the status of the terminals on-line and to transfer data to the main server in real-time.

The customer's requirements were highly complex and demanding, nevertheless the project was carried out in a quite short time frame. More than 10.000 **Airbus** employees will therefore enjoy the advantages of a complete, cutting-edge Time & Attendance system, thanks to the excellent customization applied by the supplier and the professional service of the local Partner. As a result of this first important LEGIC reference in Spain, **Softmachine** decided to join the LEGIC Partner Network to win new business opportunities.
