XAtlas Software

The XAtlas module allows to manage safely the visitors accesses. It's ideal for any company and in those situations in which to manage a large flow of visitors (exhibitions, events, conventions) is required.

The main advantage is that the guest is independent during the visit and who organized the visit always knows where the visitor is.

The full autonomy of the visitor doesn't affect the company's security, because the organizer of the visit sets the limits of time and access during the registration.

The safety is guaranteed!

Optimize the accreditation procedure, limiting management costs with VISITORS 4.0!

Advantages

Reliable

The system manages the visitors confirmation in a safe and efficient way.

Safe

The access is guaranteed only to registered personnel.

Flexible

The visitor doesn't wait at reception but he enters with the access codes received.

Integrated

Thanks to the Entro app, the guest can access independently to authorized areas.

Functionalities

- **Manage** visitor access flow in a safe and efficient way;
- **Optimize** accreditation operations;
- **Differentiate** operating modes;
- **Limit** management costs;
- **Use** new technologies for accreditation and identification;
- **Constantly** monitor the presence of visitors in the company;
- **Dematerialize** visit-related documentation.

How it works

Visitors 4.0 offers the possibility to be able to choose the **check-in mode**.

Your visitors will **receive their invitation, access codes and privacy acceptance forms by email**.

On the day of the event, they can choose whether to register at reception or automatically.

At Reception

The operator can carry out the following activities at reception:

- Scan the ID document;
- Modify authorizations;
- Extend the duration of the visit;
- Select the badge or pre-registration via station reader;
- Print disposable access credentials;
- Photograph the guest for photo placement on the Pass.

After registration:

- The system notifies the company contact;
- The operator delivers the badge with pre-set authorizations;
- The visitor can access the event.

Self Check-in

In Self Check-in mode, the guest takes part directly at the event registering automatically with the access codes received in the invitation:

- Qr code;
- Pin code;
- Entro App.

Thanks to Self Check-in, the procedure is even quicker and more practical.

The guest can only autonomously access the allowed areas and it is always possible to monitor where the guest is inside the company.
