CONSTRUCTION
SITE: YOUR
BUSINESS IS
SAFE WITH US!**

SUPPLIERS QUALIFICATION, TENDERS MANAGEMENT, ACCESS CONTROL, VIDEO SURVEILLANCE AND ANTI-INTRUSION: HOW THE INTEGRATED ZUCCHETTI AXESS SYSTEM WORKS FOR SECURITY!

The **Safety Solution's Tenders and Suppliers Qualification module** allows you to manage the safety of contractor personnel engaged in work on the company premises (intra moenia tenders) and in work performed by the company on its customers' sites (extra moenia tenders). All activities are performed while keeping strict control of the company's workplace safety budget.

With **Tenders and Supplier Qualification** the principal profiles and qualifies its suppliers in compliance with the standard model required by statutory legislation, it then links the suppliers with the necessary documentation (Records of incorporation, NI contribution records [DURC], single employment ledger [LUL], etc.) and manages the related expiry dates in order to monitor technical-professional fitness for execution of the contracted works. The documents vary both in relation to the type of contract and in accordance with the safety

measures required for the execution of the works. The Zucchetti System **checks contractor compliance, identifies potentially dangerous work processes and the adequacy of the safety measures adopted.**

In addition, by **recording accidents and near misses**, contractor companies can notify the client of all hazardous situations and the improvement measures required to make the work stations / work activities safe.

Thanks to **integration with XAtlas, the Access Control software** of Zucchetti, the solution

informs the construction site gate systems in relation to the compliance status of the contractor in question, so that worker access to the site can be granted or denied.

XAtlas is fully integrated with video surveillance (VMS) and video camera systems. The software communicates via IP with the main video management systems (VMS), managing live or recorded video streams and events. The user can monitor activities on the construction site or recorded video streams and events directly from his/her interface.
