- > SuperMax+ control panels
- > RFID2 Readers
- > Field Manager Intelligent Controllers

Pirelli relies on Zucchetti Axess integrated security solutions

Founded in 1872, **Pirelli Group** focuses on growing its business and creating value by developing high quality and high technology products and services with low environmental impact. In pursuing its objectives, Pirelli strives to combine financial profitability and social responsibility. Founded in 1960, **Turk Pirelli Lastikleri A.S.** was the first tire manufacturer in Turkey and one of the first international companies to believe in the industrial and economic potential of the country. Today Izmit industrial concern represents not only the largest factory of the group (1,900 people) but also a center of excellence for the production of top quality Truck and Car tires. In 2007, Izmit was selected as the Pirelli production center for racing tires and between 2011 to 2013 the Turkish factory will be the manufacturing center for Pirelli Formula 1 tires.

case history

Client Requirements

The most crucial requisites for the update and implementation of the new system in Pirelli were to install an anti-passback control on all the access points, a certified SAP connector to connect the Time Management system to their SAP HR application and to integrate T&A software with access control and canteen management. In addition, T&A readers had to be placed at every access point in the factory.

Achieved Project

Pirelli chose the most satisfactory solution - proposed by Zucchetti Axess Turkish Partner ICS Ltd - based on XAtlas Software to manage access control, T&A for data collection and its certified SAP interface, Canteen and Parking Management.

The AXESS TMC terminals installed more than 10 years ago have been replaced with recent SuperTRAX terminals, SuperMax+ panels and RFID2 readers, and the hardware infrastructure has been powered thanks to the new generation Controllers (Field Manager) managing all interactions among the applications.

Why Zucchetti Axess?

Mr Remzi Ejderoglu

IT Manager Turk Pirelli Lastikleri A.S

"I've been working at Pirelli for 25 years now. I am an Italian oriented businessman and I am convinced that Italian products ensure the same quality than German products – besides more competitive in pricing. This is why I made the decision to choose an Italian system for our company (**Zucchetti Axess SpA**), which is now running fine and could fully satisfy Pirelli requirements. The system installed at Pirelli will be a visible reference of **Zucchetti Axess** Products in Turkey, which is a big market and there are still lots of things to do, especially within many companies that have implemented SAP HR module but have not yet achieved a real Time and Attendance and security integration."
